

Miracote BC Pro

Single Component - Polymer-Modified - Cementitious Bond Coat

Product Features

- Single component - Just add water.
- Economy and performance in one package
- Enhanced bonding capabilities.
- Provides balanced hydration during plastering process.
- Eliminates excessive substrate preparation.
- Saves time and money in labor and equipment costs.
- Ideal bond coat between a cementitious waterproofing membrane and plaster application.
- Significantly reduces pool plaster delamination problems.
- Low VOC – Meets LEED Criteria.
- Can be integrally pigmented to match various plaster finishes.

Superior Performance For Pool & Spa Renovation

Miracote BC Pro is a single component, polymer-modified, cementitious coating that only requires the addition of potable water on site for use as a bond coat and adhesion promoter for pool plaster applications. Specially formulated to provide unparalleled performance in submerged applications, **Miracote BC Pro** delivers a superior mechanical and chemical bond between new pool plaster finishes and existing plaster, concrete and similar substrates. **Miracote BC Pro** is designed not only to enhance performance, but to save time and the cost of application by eliminating the need for excessive preparation work of existing pool substrates.

Miracote BC Pro

Single Component - Polymer-Modified - Cementitious Bond Coat

Don't replace it – Miracote It!

Apply over a sound acceptable substrate with a minimum CSP-2. Mix one (55lb) bag mix with 5-7 quarts of clean potable water. Mix with Jiffy type mixing paddle for 3 - 5 minutes. Apply with dip-n-roll technique with a loop roller or spray with hopper type gun. Cure 8 hours (but 24hrs is recommended) before plastering. Drying time is predicated on environmental conditions.

Product Applications

- Pools & Spas
- Raised Bond Beams
- Water Features
- Dam Walls
- Fountains & Ponds
- Troughs
- Spillways
