Raypak®
A Rheem® Company

ENGINEERED TO PERFORM.

The Most Durable Pool Heater Available

The Professional Indirect Pool Heater, utilizes Raypak's ultra-high-efficiency XTherm boiler which drives a highly efficient indirect heat exchanger. The Professional Indirect is corrosion resistant and comes as a factory built skid system, so no set-up is required. It is easy to install and commission. The Professional Indirect provides high-efficiency heating with minimal maintenance, perfect for heavy commercial usage, such as competition pools.

Condensate treatment kit

Pre-plumbed boiler loop w/ system pump and expansion tank

Cupronickel or titanium indirect heat exchanger

Reversible PVC venting

PVC vent connection is factory standard. PVC venting can save thousands in venting costs, and is easier to handle and install.

BUILT TO LAST.

VERSA IC intelligence with Raymote connectivity.

Raypak's VERSA IC combines modulating temperature control, safety limits, and ignition programming into one user-friendly integrated control platform. With self-learning features that prevent equipment damage, this automated controller is easy to set-up, understand, and use, making it as close to plug and play as possible.

The VERSA IC system can be remotely monitored through the Raymote mobile app or web dashboard. With touch-of-a-button access to vital information, Raymote gives you:

- Real time service notifications to keep you informed.
- View and manage your Raypak systems at multiple sites.
- Instant visibility to historical data and performance reports.

1 year of Raymote service included.

Raymote retrofit kits available for installed products with the VERSA IC touchscreen.

Raymote™

Corrosion Resistant Heat Exchanger

The Professional Indirect utilizes a highly corrosion resistant cupronickel heat exchanger or can be configured with a titanium heat exchanger for the ultimate in corrosion resistance. The indirect heat exchanger keeps the boiler safe from corrosive pool water (low pH, high TDS or high chlorine levels) by separating the boiler from the pool water.

Time/Labor Savings/ Easy To Move

We save you time and money by delivering the Professional Indirect as a factory built skid system. The Professional Indirect skid can be separated into two pieces which means it is easy to move and install. Our engineered boiler pumps ensure proper delta T. This means no setup is required, just hook up the water, gas, and electrical and you are ready to go.

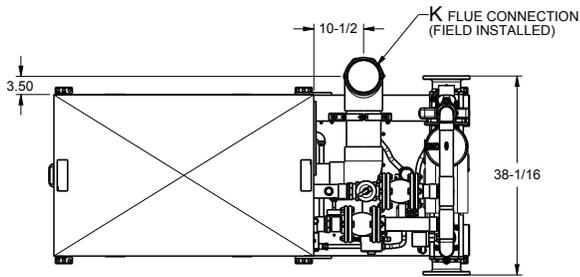

Condensate Treatment Kit

The Condensate Treatment Kit raises your pH for disposal (drainage). The Professional Indirect has a factory mounted condensate treatment kit standard on each unit. At no additional cost the first treatment kit is included with the system (must be replaced on a periodic basis – see manual for details).

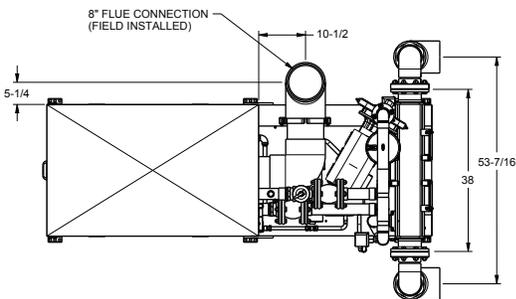

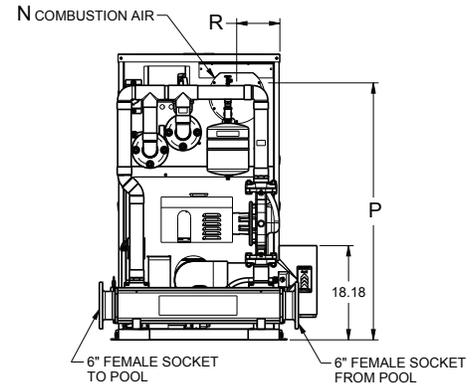

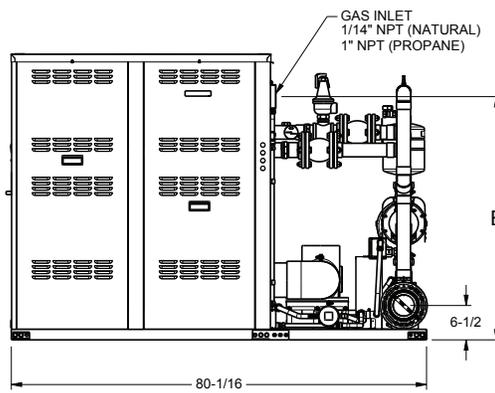

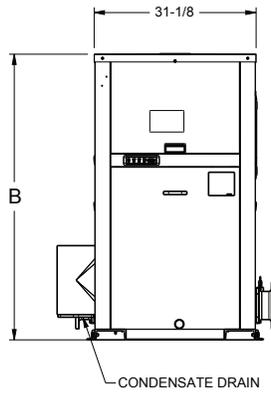

Maximum Performance

Reduce operating costs and heat your water quicker with XTherm's 96% thermal efficiency. Enhance your capability and flexibility. The XTherm can perform at 7:1 turndown and cascade up to 8 heaters.
