1102	37,534	10-7/8”	23”	15”	46	60

c UL us LISTED

SpaPak 552 and 1102 Standard Features

All models

- **Brass Headers**
  Brass headers prevent rust stains from harming your pool or spa’s surface, giving you years of trouble-free swimming pleasure. They also allow for a corrosion free connection to your spa plumbing, making any future servicing a snap.
- **Copper Water Vessel**
  The Rheem Electric Spa heater has a completely non-ferrous waterway. The cast brass headers are connected with an all copper water tank. This ensures that the spa water only comes in contact with a rust free environment. This helps keeps your spa rust stain free.
- **1-1/2” Water Connections**
  Every Rheem Electric Spa heater comes standard with 1-1/2" NPT male connections to make your installation secure and effortless. No other special connections are required, such as current collectors or heat sinks.
- **Heating Element**
  The heart of any electric heater is the heating element. The Rheem Electric Spa heater comes with a robust, incoloy sheathed heating element. The top of the element is 3/16” stainless steel, again, ensuring a rust free environment.
- **Contactor**
  Rheem Electric Spa heaters use commercial grade components. Take one look at the heavy duty power contactor and you know this heater is built to last.
- **Safety**
  Inside every Rheem Electric Spa heater is a built-in device to prevent overheating. In the event the heater is energized when the water flow is insufficient, a resetable high limit will prevent the heater from operating in an unsafe condition.
- **240v Operation**
  Both of the Rheem Electric Spa heaters operate with 240v single phase power. The model 552 draws about 23 amps @240v and the model 1102 draws about 46 amps @240v.
- **Energy-Efficient**
  Energy-smart Rheem heaters consistently achieve the highest efficiency ratings. They exceed all federal and state standards.

Quality assurance

- **ISO 9001**
  We are proud to be an ISO 9001 registered manufacturing plant. It’s one more reason why Rheem is number one in the heater industry today.
- **End-of-Line Test**
  Every Rheem Electric Spa heater is test-fired before it is put in the carton. This ensures that your heater will work right out of the box and continue to give you years of trouble-free operation.
- **UL Listed**
  The Rheem Electric Spa heaters are listed with UL and cUL.

Model	Water Temperature Rise in °F/Hour				
	5°	10°	15°	20°	25°
	Gallons of Water				
552	450	225	150	113	95
